

Bacteria	Characteristic
<b>Vibrio cholerae</b>	Division time: 13 minutes (rapid growth)
<b>Mycobacterium tuberculosis</b>	Division time: 24 hours (slow growth)
<b>Staphylococcus aureus</b>	Complete (beta) hemolysis on blood agar
<b>Streptococcus pyogenes</b>	Complete (beta) hemolysis on blood agar
<b>Streptococcus viridans</b>	Partial (alpha) hemolysis on blood agar
<b>Pneumococci</b>	Partial (alpha) hemolysis on blood agar
<b>Enterococci</b>	No (gamma) hemolysis on blood agar
<b>Haemophilus</b>	Grows on chocolate agar (fastidious bacteria)
<b>Neisseria</b>	Grows on chocolate agar; requires elevated CO <sub>2</sub>
<b>Mycobacterium tuberculosis</b>	Grows on Lowenstein-Jensen medium
<b>Corynebacterium diphtheriae</b>	Grows on blood tellurite agar
<b>Enterobacteria</b>	Selective for bile; ferments lactose on MacConkey's agar
<b>Staphylococcus spp.</b>	Grows on mannitol salt agar (high salt concentration)
<b>Vibrio cholerae</b>	Yellow on Thiosulfate-Citrate-Bile-Sucrose agar (sucrose fermenter)
<b>Vibrio parahaemolyticus</b>	Green on Thiosulfate-Citrate-Bile-Sucrose agar (non-sucrose fermenter)
<b>Pseudomonas aeruginosa</b>	Obligate aerobe; requires oxygen for growth
<b>Bacteroides fragilis</b>	Obligate anaerobe; cannot survive in oxygen presence
<b>Campylobacter</b>	Microaerophilic; grows in low oxygen conditions
<b>Helicobacter</b>	Microaerophilic; requires low oxygen levels
<b>Clostridium perfringens</b>	Aero-tolerant anaerobe; tolerates low oxygen
<b>Neisseria</b>	Capnophilic; requires elevated CO <sub>2</sub>
<b>Brucella</b>	Capnophilic; also requires elevated CO <sub>2</sub>
<b>Lactobacilli</b>	Acidophilic; prefers low pH levels
<b>Vibrio cholerae</b>	Alkaliphilic; prefers high pH levels
