

1. You heard about a new treatment technique that can be used to treat a common disease. After you read in the literature, you found positive results using these cells in large animals. You decided to be the first doctor in the country who applies this new technique on your patients who really suffer of that disease. You really want to help them out and be a pioneer in your field. Is this ethical?
 - A. Yes
 - B. No
 - C. I do not know

2. You read an article that provides a proof of principle for using stem cells for the treatment of a certain disease using cell culture. You liked the idea and you decided to try it on your end-stage patients affected by that disease. They will die soon any way. Is this ethical?
 - A. Yes
 - B. No
 - C. I do not know

3. After learning the biology of stem cells, do you think that human embryos should be used for stem cell research?
 - A. Yes
 - B. No
 - C. I do not know
